

We know Long Term Care facilities' primary concerns are to improve hygiene, combat infection, increase operational efficiency, reduce waste, and convey a high-quality image.

Georgia-Pacific understands the specific needs of Long Term Care and Assisted Living facilities and can work with you to develop the right solution. The areas designed for public use are where visitors will get impressions of how well the facility is run and how clean it is. The products in the resident areas should provide them with the ultimate comforts of home. Every space within a long term care facility needs to communicate hygiene, order and care. Georgia-Pacific products help to prevent cross-contamination and minimize the spread of healthcare-associated infections by offering automatic touchless dispensing systems, quality soaps, patient care wipers and products for your cafeteria and patient meals. And in keeping with our guiding principles, we are committed to preserving and sustaining the environment by manufacturing these environmentally friendly products.
